

FON WiFi Connection Manager for Nokia Phones

The **FON WiFi Connection Manager for Nokia Phones** has been developed to facilitate the automatic connection to FON Access Points (FONspots). It automatically detects nearby FON WiFi signals all around the world and assists you in connecting to them. Once you have stored the connection preferences (including username and password) for your preferred FON WiFi signals, the FON WiFi Connection Manager detects those signals automatically and connects you to them.

The application has been designed to work on **Nokia E60, E61, N80, N91, N92, N93 and N95.**

Installation

The **FON WiFi Connection Manager for Nokia Phones** works under Symbian Series 60 Version 3. To install the application on your phone follow these steps:

1. Save the installation file that ends with **".sis"** on the phone. This can be done via cable or bluetooth or simply by sending it to your phone via email or MMS.
2. Select and open the file directly on your phone.
3. Accept all of the following steps until you reach the FON Tutorial screen

1 Once the application is installed, you will see the FON logo on your desktop.

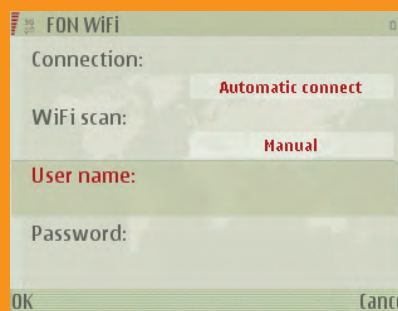

FON Client logo in the menu

2 After opening the application from your phone's desktop, please read the tutorial and then close it under "*options => close tutorial*"

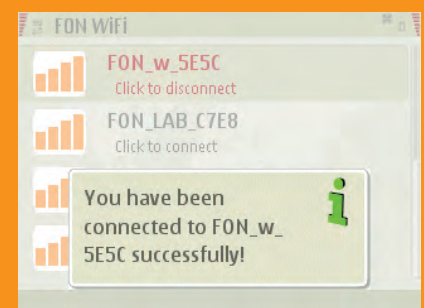

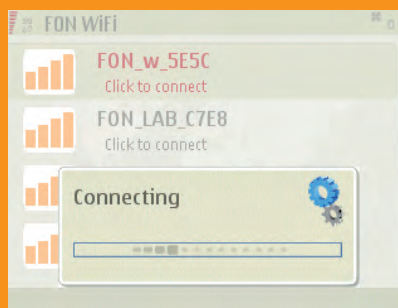

FON tutorial screen

3 After closing the tutorial, you will get to the "*Settings*" screen. Please define if you want to have an automatic connection or not. Also save your username and password in case you want to have them automatically accessible.

Settings screen (left with empty and right with filled user credentials)

4 As soon as you have a FONspot's WiFi signal detected within your network listing screen you may connect to it. If you have saved your username and password in the Settings, the connection will be established automatically. You will see the following screens.

Connecting messages: connecting and successful, connection confirmation

5 Once you are connected (you will receive confirmation of such), the network entry will have the status text "*click to disconnect*" and you will be able to access the Internet.

Network listing screen with the FON_w_5E5C FONspot connection and the status text "*Click to disconnect*"

Using your FON WiFi connection

Once establishing of a FON WiFi connection has been confirmed (see [5](#)), you may switch (without closing the FON WiFi Connection Manager) to an application that will use this FON WiFi Connection (web browser, VoIP client, etc.).
